SUMMARY

I'm an engineering leader and serial founder-CTO with 15+ years spanning early-stage builds and NASDAQ-scale organizations. I've built high-volume, near-real-time platforms from the first commit, grown engineering teams from one engineer to fifteen, and directed 50+ engineers across four business units through their managers. As a co-founder I reached \$50K MRR with 3,000+ clients in 12 months. My current work is AI-native engineering: I build production agentic systems (multi-agent, RAG, MCP), ship with Claude Code and Cursor daily, and own the evaluation, guardrails, and governance that make AI adoption real and safe. I think like a product owner and stay technical enough to challenge a model, interrogate an incident, and keep the trust of the engineers I lead.

WHAT I BRING

Founder-builder who scales · First engineer in the door and the co-founder who set architecture, standards, and the hiring bar. Built Nymbl's platform from the first commit and grew the team 0 to 15; first engineering hire at Onemata, scaling 1 to 15. I ship with my own hands and build the leadership bench that lets an org grow past me.

AI-native and agentic engineering · Daily work. I build production agentic AI (multi-agent systems, RAG, tool/function calling, vector search, MCP), ship with Claude Code and Cursor, and own the adoption half most teams skip: responsible-AI governance aligned to NIST AI RMF, guardrails, least-privilege access, and human-in-the-loop review.

Leadership at scale, through leaders · Directed 50+ engineers across four business units through directors and managers at a NASDAQ company, and led distributed teams across the US, India, and Europe. I build high-performing teams, shape technical culture and standards, and align functions behind one roadmap.

Platform and near-real-time systems · High-volume, event-driven systems from scratch: streaming ingestion on Kafka and Spark, and a platform serving 135M+ records with sub-second retrieval. Availability, observability, and incident discipline are defaults; I've driven enterprise cloud modernization with multi-million-dollar cost reductions.

Product-minded and commercial · I manage to outcomes, not activity. I've owned unit economics directly: a self-serve portal that cut client onboarding from 3+ months to under 24 hours, SOC 2 with \$1.2M annual savings, and platforms I built from zero.

EXPERIENCE

InsidePartners.ai (formerly Onit Tech Solutions) | Remote — Co-Founder & CTO / Chief Automation Officer | 2020 – Present

- Co-founder and technical lead of an AI automation and fractional-engineering-leadership practice: build production agentic AI (multi-agent systems, RAG, MCP) and set the standards, governance (NIST AI RMF), and reference patterns for safe adoption.
- Built a real-estate ML decision engine (AppFolio/QuickBooks to BigQuery with a Looker layer) scoring hold, sell, refinance, and renovate per asset on DSCR, LTV, cap rate, and cash-on-cash return.
- Representative outcomes: cut a core billing process from three days to four hours; \$250K+ in annual savings per engagement.
- Separately co-founded **Elteve** as CTO (2022–2024), building an on-parcel ad-tech platform (Shopify app, Chrome extension, ShipStation integration, NextJS/React) on patented QR label technology; live pilots at 3 logistics hubs with 5 brands and ShipStation/USPS partnerships before a PE acquisition.

Nymbl (acquired by Inunity) | Remote — Co-Founder & CTO → VP of Engineering | 2022 – 2025

- Built the full platform from the first commit on AWS (serverless, Redshift, Elasticsearch) with a production ranking and lead-scoring engine serving 135M+ records at sub-second retrieval; reached 3,000+ clients and \$50K MRR in 12 months and grew the team 0 to 15.

- As VP of Engineering post-acquisition, led the technical integration into a live multi-product platform with no customer interruption and ran a cross-continental team (US, India, Europe) through their leaders.

Onemata | Denver, CO — Head of Engineering | 2020 – 2022

- First engineering hire; grew the team 1 to 15. Built a high-volume, event-driven streaming platform on AWS (S3, ECS Spot, Kafka, Spark on EMR, Python) with proprietary data-quality, fraud-detection, and bot-detection algorithms.
- Shipped a self-serve delivery portal that cut client onboarding from 3+ months to under 24 hours. SOC 2; \$1.2M annual savings.

Altisource (NASDAQ: ASPS) | Denver + Global — Manager, Technology (RentRange) → Senior Manager, Product Development | 2014 – 2020

- Started at RentRange in 2014 and grew through its acquisition by Altisource into enterprise engineering leadership: directed 50+ engineers across four business units through directors and managers on regulated financial and mortgage data.
- Led enterprise cloud modernization to AWS with multi-million-dollar cost reductions and roughly 7 M&A integrations; led a patented Rental Automated Valuation Model and the Investability buy-box, matching, and underwriting platform that sourced, valued, and acquired single-family homes for investors at scale.

SKILLS

Engineering leadership & org design; scaling teams through managers · AI-native & agentic development: multi-agent systems, RAG, MCP, tool/function calling, vector search; Claude Code, Cursor; governance (NIST AI RMF), guardrails, evaluation, human-in-the-loop · platform & near-real-time systems: Kafka, Spark/EMR, event-driven streaming, sub-second retrieval at scale · cloud & data: AWS, GCP (BigQuery/Looker), serverless, containers/ECS, CI/CD, observability, FinOps · hands-on: Python, TypeScript/React, SQL · regulated & secure: SOC 2, HIPAA/CLIA, regulated financial data · domain: real estate / proptech, fintech-adjacent · 15+ years

EDUCATION

B.S. Management of Computer Systems · University of Wisconsin-Whitewater · 2011
